# Asset Management in Action

## Webinar Series

ASSET MANAGEMENT COUNCIL

### Advancing Decision Support in Asset Management

ActewAGL delivers one of the most reliable electricity networks in Australia. They are proud to have developed a system of applications that align to provide their asset managers with the decision support to optimise the management of critical assets on a whole-of-life basis. Their system combines data from their geospatial database and their works management application, which in turn is processed by the decision support application to automatically produce an Asset Specific Plan (ASP) for every asset.

At its core, their decision support application uses data as the input to a series of algorithms that provide for an optimal capex replacement/augmentation program and maintenance work schedule.

The ultimate aim of their asset management system is to implement their corporate mission, which is to offer their customers the safe, reliable and sustainable energy solutions they want.

Without a doubt, the improved capabilities that have resulted from this ground breaking project have escalated ActewAGL's asset management achievement far beyond anything that could have previously envisioned.

**Join Mike to learn about this ground-breaking project: the journey, the challenges, the opportunities and the results.**

**Free for Members**

\$30 for non-members

The Asset Management Council is pleased to present the second in a series showcasing projects from our Excellence Awards finalists during AMPEAK16 and 17.

#### Date

**Tuesday 26th September**

#### Time:

**1pm—2pm AEST,**

**12.30pm—1.30pm ACST,**

**11am—12pm AWST**

#### Place:

**Online Webinar**
