Asset Management in Action

Webinar Series

ASSET MANAGEMENT COUNCIL

A Unique Solution for Asset Integrity Management

Free for Members

\$30 for non-members

IMPower Technologies® developed a simplified approach for asset integrity management across the Energy and Natural Resources sector. The MRMP® Solution for Asset Integrity Management consists of a framework incorporating integrated software technologies and end-to-end processes, used by inspectors, asset management, on-site maintenance and engineering teams and planners to reduce the risk of critical asset failure, targeting maintenance and capital spending based on risk.

It is quick and easy to deploy by centralised asset management or on-site maintenance teams, demonstrating immediate benefits, standardising defect processing for on-site personnel, simultaneously creating a unified view and solid foundation for centralised predictive monitoring and diagnosis of failures across large scale critical assets.

Since 2010, the MRMP® Solution has been adopted within one of the world's largest resources organisation on balanced machines, fixed civil (process and non-process) infrastructure and bridges across the Pilbara.

The Asset Management Council is pleased to present the first in a series showcasing projects from our Excellence Awards finalists during AMPEAK16 and 17.

Date

Tuesday 12th September

Time:

1pm–2pm AEST,

12.30pm–1.30pm ACST,

11am–12pm AWST

Place:

Online Webinar

Presented by Dr Yvonne Power

Dr Yvonne Power is an electrical engineer and has a PhD in integrated process operation management. She has worked nationally and internationally on intelligent Asset Performance Management (iAPM), focussing on software development, guiding technology developments as part of a technical steering committee

and successfully introducing asset health initiatives into operation such as iron ore, uranium, gold, alumina, hydroelectric power generation, civil infrastructure and rail.

Since starting IMPower Technologies® Dr Power has consulted to some of the world's largest resources organisations, working closely with different teams across a combination of disciplines and organisational levels to successfully introduce 'asset health' initiatives into organisations. Systems developed are monitoring balanced machines, civil (process and non-process) assets, bridges and rail across the Pilbara.
