

DRONE DATA SHAPING THE FUTURE OF ASSET MANAGEMENT

The use of drones has rapidly expanded throughout the asset management industry. Is it a fad or has it already become our new reality?

This evolving technology may have initially changed the way we inspect physical assets, however data collection is driving a change in the way we manage them.

We now have the ability to use a tool such as a drone, to capture vast amounts of information. However, where the real value has been created is the ability to then process that information into highly detailed and usable data.

The ability to recall an asset from anywhere at any time is an invaluable tool required for a world with rapidly evolving workflows, working habits and client expectations.

What you will learn from this webinar:

- How drones are changing the way inspections are conducted
- What is the real deliverable from drone technology?
- How will drone data change the way assets are managed?

Presented by:

Derek Feebrey is CEO of Hoverscape. A drone operator and data provider specialising in solutions for the asset management industry.

Date:

26 March 2019

Time:

1pm AEDT

Cost:

Free for AMCouncil members, otherwise \$30
